

Hose cutting machine Cut-MT

Cut-MT was developed for manually cutting several hoses at the same time. In its development, special attention was paid to the exact placement of hoses. Thus, it is possible to cut soft and long hoses exactly with it. The precise knife and hose guidance make for right angles at the cutting edges. The hose will retain its original shape.

The Cut-MT is a simple machine that is perfectly suited for its task of shortening long hoses precisely. When the hoses are inserted and clamped, the carriage is used to place the hoses in the grooves almost without tension. After complete insertion, the knife, which can be set freely regarding its angle, will cut all hoses at the same time

Due to its simple operation, the machine can easily be operated by a single employee. Hose size must be indicated when ordering.
